

REACH Declaration of Compliance

REACH European Regulation (Registration, Evaluation and Authorisation of Chemicals)

The REACH regulation also pertains to the use of chemical substances for which the alert level remains high (Substances of Very High Concern "SVHC" and attachment XIV and XVII) and restricts their production, their commercialization, and use as an element of a composite or in a product, as they could pose potential severe consequences on human health and the environment.

Art. 33 of Regulation 1907/2006 REACH provides that suppliers of articles containing one of the substances of very high concern contained in the candidate list (SVHC) in a concentration higher than 0.1% (weight/weight) must provide sufficient information to allow safe use of the article by the recipients of the article itself.

Sauro requires from all of its suppliers that the substances noted on the SVHC list and in attachments XIV and XVII, including their amendments and additions possibly present in the materials supplied by them, are recorded in full compliance with the regulation.

SCIP

In order to make this information publicly available, ECHA has established a special database called SCIP (Substances of Concern In articles as such or in Complex Objects / Products). This database relates to information on substances of concern in articles as such or in complex objects.

Sauro s.r.l. as a manufacturer of products has provided the aforementioned SCIP notification.

The table below shows the data relating to the products subject to this notification, as complex objects containing articles with substances listed in the SVHC of 14/06/2023 in quantities greater than 0.1% (w/w).
